Abstract not available for CN 1329875 (A)

Abstract of corresponding document: EP 1166716 (A1)

Disclosed is an bioelectrical impedance measuring apparatus which is simplified in structure and which is easy to use. A measuring apparatus comprising a personal data input unit (202) which is used in inputting personal data and a pluralty of electrodes (A,B,C,D) which are used in measuring bioelectrical impedance is improved according to the present invention in that it comprises: a meory in which the personal data are stored via said personal data input unit; and a control device (101) which carries out a required control by using at least one selected electrode to store the personal data in said memory or to retrieve the personal data from said memory.
